We have created a full custom programming for the main system of this project that will help the company owners to manage their clients accounts and products following their pyramid marketing tree, It is a network market management. We make the following tasks:

1- Registration form: It is for user who needs to be in the network. The system will generate code for him (IR). When the user is been registered, he is not activated until the admin activate him.

Note: Each user has 2 users in left and right under him.

2-Login Form: User can enter his IR and the password.

3-After the user login, the user can see:

a- His accounts he win from the users that registered with him.

b- The Users tree that they under him.

c- Uncompleted users that they have no users under them.

d- Update his account

c-Redeem money from his accounts.

4-Admin can see all registered users and can activate or delete new registered users.

5- Admin can reduce the money for the user he took it.

6-Admin can give bonus to user or reduce the money the user he will take and can see every bonus or discount with its date.
