

Website Design Technology in Egypt:

The website will consists of very dynamic modules based on the latest technology used in developing websites like Linux operating System, Apache 2, Cpanel, Ajax, CSS, Java Script, JQuery, MySQL Database and PHP based on Database with CMS.

Tried and proven technology.

- High performance Unix/Linux servers.
- Latest Intel based servers with tons of RAM
- Dynamic content management system software (CMS) on all our plans.
- Java Script
- Ajax
- CSS
- XML
- Web site statistics by Web stats and Google Analytics.
- Add and manage your email users with Cpanel.
- Fast MySql databases.
- **Fully managed service including updates to the software and to ths CMS to its last**

Version.

- Perl5.8.8/ModPer2 for added speed.
- PHP5.
- Optional virus scanning of received email at server.
- Firewall on all our servers.
- Weekly backup to ensure that your data will be safe.
- Optional, Additional firewall plans for added security value.

We use many and different CMS according to clients needs like:

- Joomla CMS Last Version.
- WebGUI 5.8.8 CMS (We have stopped developing with this script as it became outdated

and has no support from Plainblack.com)

- WebGUI 7.8.13 CMS
- Drupal CMS Last Version
- Different Forum
- Word Press blogs Last Version
- and many more...
